Applicant(s)

REISINGER ET AL.

Examiner

Kevin Y Kim

Art Unit

2634

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133).
- Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 26 November 2001.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 1-19 is/are pending in the application.
- 4a) Of the above claim(s) _____ is/are withdrawn from consideration.
- 5) ☐ Claim(s) _____ is/are allowed.
- 6) ☒ Claim(s) 1-19 is/are rejected.
- 7) ☐ Claim(s) _____ is/are objected to.
- 8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on _____ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.
- Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
- 11) ☐ The proposed drawing correction filed on _____ is: a) ☐ approved b) ☐ disapproved by the Examiner.
- If approved, corrected drawings are required in reply to this Office action.
- 12) ☐ The oath or declaration is objected to by the Examiner.

Priority under 35 U.S.C. §§ 119 and 120

- 13) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some * c) ☐ None of:
1. ☐ Certified copies of the priority documents have been received.
2. ☐ Certified copies of the priority documents have been received in Application No. _____.
3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).
- * See the attached detailed Office action for a list of the certified copies not received.
- 14) ☐ Acknowledgment is made of a claim for domestic priority under 35 U.S.C. § 119(e) (to a provisional application).
- a) ☐ The translation of the foreign language provisional application has been received.
- 15) ☐ Acknowledgment is made of a claim for domestic priority under 35 U.S.C. §§ 120 and/or 121.

Attachment(s)

- 1) ☒ Notice of References Cited (PTO-892) 4) ☐ Interview Summary (PTO-413) Paper No(s). _____
- 2) ☒ Notice of Draftsperson's Patent Drawing Review (PTO-948) 5) ☐ Notice of Informal Patent Application (PTO-152)
- 3) ☒ Information Disclosure Statement(s) (PTO-1449) Paper No(s) _____ 6) ☐ Other: _____

DETAILED ACTION

Claim Rejections - 35 USC § 112

1. The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

2. Claims 6, 7 and 8 are rejected under 35 U.S.C. 112, first paragraph, as containing subject matter which was not described in the specification in such a way as to enable one skilled in the art to which it pertains, or with which it is most nearly connected, to make and/or use the invention. Claim 6 calls for applying spreading to the data message by a direct sequence spread spectrum to the method of claim 1. However, the specification including the drawings fails to disclose any structure or steps regarding how the data message is direct sequence spread spectrum modulated in a way one skilled in the art can practice the claimed invention without undue experimentation. And yet for examination purposes, it is assumed that data undergoes a spreading the direct sequence spread spectrum prior to modulation with one of the plurality of carrier frequencies. Claims 7 and 8 are rejected under the same ground for dependence from the rejected claim.

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 1-3 and 11 are rejected under 35 U.S.C. 102(b) as being clearly anticipated by Braun et al (US 4,809,296).

Consider claims 1 and 11 first. Braun et al discloses a method of transmitting data modulated on a carrier frequency, wherein the same information is transmitted several times in succession (i.e., "more than one time ... in temporal succession") on different carrier frequencies. See Abstract and col.3, ll.4-40 in particular in connection with Figures 1-3. Further, all the frequencies selectively changed during transmission "occurs within one signal transmission channel" because all the different carrier frequencies are used in one transmission medium.

Regarding claim 2, Fig.3 shows a different frequency is used for each of a plurality of information units.

Regarding claim 3, see col. 3, ll. 32-35 teaching the applying of frequency hopping of the carrier frequencies (i.e., spreading to the data message by a predetermined sequences).

3. Claim 11 is rejected under 35 U.S.C. 102(b) as being anticipated by Kay et al (5,513,183).

Kay et al teaches transmitting a method of transmitting data modulated on a carrier frequency, wherein the same information is transmitted several times in succession (i.e., "more than one time ... in temporal succession") on different carrier frequencies. See col.3, ll.54-63.

4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

5. Claims 4, 5, 9 and 10 are rejected under 35 U.S.C. 103(a) as being unpatentable over Braun et al. as applied to their respective base claims above.

Braun et al discloses all the subject matter claimed, as explained above in connection with claim 3, but is silent on specific carrier frequencies or data rates. Thus, it can not be ascertained whether or not the difference between the carrier frequencies is in an order of magnitude of a data rate of the data message as claimed in claim 4 or in a range between one quarter and two times a data rate of the data message as claimed in claim 5.

However, it is noted that a selection of carrier frequencies and data rate of the data is a matter of design choice, it would have been obvious to one skilled in the art at the time the invention was made to select carrier frequencies and data rate that have the claimed relation between them particularly because applicant have failed to disclosed such relationship between carrier frequencies and data rate solves any stated problems or is for any particular purposes. Likewise, although Braun et al is silent on a tolerance range of carrier frequencies, it would have been obvious to one skilled in the art at the time the invention was made to set the tolerance of the carrier frequencies of Braun et al reasonably low, i.e., "not more than $\pm 10\%$ " because it is a well established engineering principle to have a low tolerance in order to provide stable carriers.

6. Claims 6-8 are rejected under 35 U.S.C. 103(a) as being unpatentable over Braun et al in view of Stewart et al (US 5,812,557).

Braun et al disclose all the subject matter claimed, as explained above in connection with claim 1, except for applying direct sequence spread spectrum to the data messages.

Stewart et al teaches that spread spectrum signaling including direct sequence is one of best methods of communication in a noise transmission environment like a power line.

See col. 4, ll.40-59. Thus, it would have been obvious to one skilled in the art at the time the invention was made to apply direct sequence spread spectrum modulation, as taught by Stewart et al to transmission data of Braun et al prior to modulated on carrier frequencies for the purpose of mitigating the effects of noise from outside of the transmission channel.

7. Claims 12-19 are rejected under 35 U.S.C. 103(a) as being unpatentable over Braun et al (US 4, 809,296) in view of McCaslin (US 5, 036,294).

Consider claims 12, 13, 16 and 17. Braun et al discloses a carrier frequency generator (11) for generating different carrier frequencies and a transmitter (8) modulating the different carrier frequencies with data successively in time. Braun et al fails to show the specifics of the frequency generator that generates a plurality of different carrier frequencies. Referring to Fig.2, McCaslin teaches a crystal oscillator and at least one capacitor as a way of producing different carrier frequencies. Thus, it would have been obvious to one skilled in the art at the time the invention was made to substitute the capacitor network including the crystal oscillator taught by McCaslin for the frequency generator of Braun et al. Further with respect to claim 16, all the frequencies selectively changed

during transmission "occurs within one signal transmission channel" because all the different carrier frequencies are used in one transmission medium.

Regarding claims 14 and 18 since the carrier frequencies of Braun et al are changed in a predefined way, the switches 42 in the combination of Braun et al and McCaslin, as described above, would have obviously programmed.

Regarding claims 15 and 19 further calling for a carrier frequency control device, Braun shows a frequency selecting circuit 10 that would have been connected to the capacitor network comprised of capacitors and switches, functioning as the carrier frequency generator, in the combination described above.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Kevin Y Kim whose telephone number is 703-305-4082. The examiner can normally be reached on 8AM --5PM M-F.

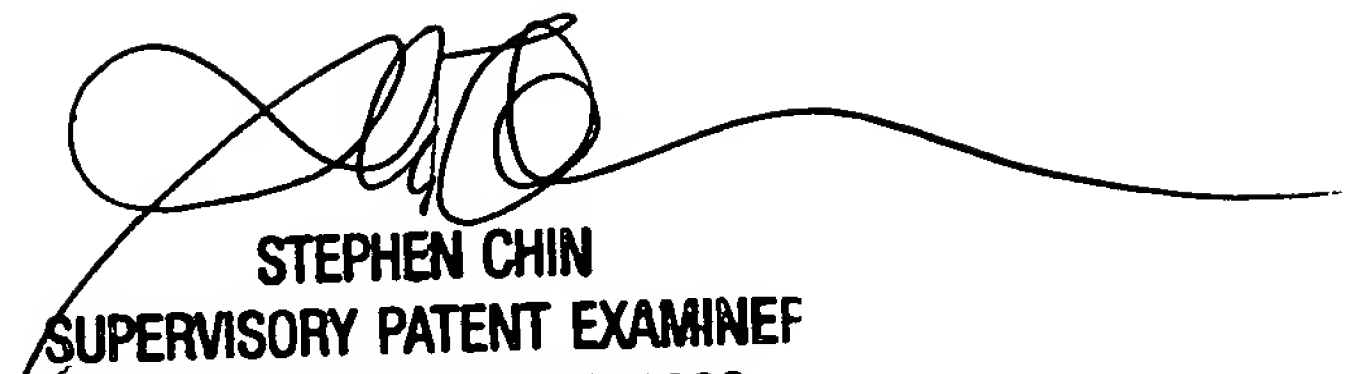

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Stephen Chin can be reached on 703-305-4714. The fax phone numbers for the organization where this application or proceeding is assigned are 703-872-9314 for regular communications and 703-872-9314 for After Final communications.

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the receptionist whose telephone number is 703-305-3900.
